VT602 Stereo Earphone

VT602 Stereo Earphone, beige straight cable

The VT602 is a stereo version of the well-known VT600. Excellent sound and ease of use are the primary user benefits.

The VT602 comes with 2 Flexible Ear Inserts. The open frame design still allows the user to hear ambient noise, they fit without pressure entirely in the outer auditory canal. They are very comfortable even after many hours, are hygienic and can be cleaned very easily.

The VT602 is the ideal solution for discrete stereo listening (for example with a professional camera).
